

The world's most secure archive, powered by Microsoft Azure

Archiving, records management, and eDiscovery—accessible, flexible, and 100% under YOUR control

Your organization is producing massive volumes of data year over year, all of which must be stored securely and cost-effectively in line with your compliance requirements, legal discovery obligations, and records management policies.

What is Archive2Azure?

Archive2Azure is an intelligent, open-standard archive that reduces the costs (by as much as 90%) of storing and managing massive volumes of data while meeting complex legal and regulatory requirements. Archive2Azure's use of tiered Azure Blob Storage, Machine Learning, AI, and Cognitive Services transforms data into valuable and actionable business intelligence.

Unified onboarding + archiving

"An AI model is only as good and complete as the data it can operate on and learn from.

"Unique to Archive360 is its position as a sole-source provider of both accelerated, compliant data onboarding and AI-enabled modernization of ANY data type.

"Archive360's data onboarding capabilities such as validation and auto-classification ensure 'good' data, while Archive2Azure's open-standard architecture ensures 'complete' data."

Control infrastructure security

Isolated and dedicated tenant for each customer

Full support for customer-defined security policies

Transparent security audits and monitoring

Control information security

Customer-controlled / customer-managed encryption keys

PII and sensitive data metahashing

Single-point user management and authentication

Meet in-country data residency and disposition requirements

Open-standard platform

Flexible access to eDiscovery functionality

Customer-controlled scalability

Open search APIs powered by Apache Lucene with Machine Learning analysis for data tagging and analysis

Example use cases include journal data from Exchange or Office 365, third-party email archives, file shares, data in excess of SharePoint limits, Office 365 Teams, voice and video files, financial records, contracts, planning documents—with everything (including metadata) stored in an open-standard, intelligent archive in its true, native format in YOUR Azure tenant for immutable security with no vendor lock-in.

Archive360 is a Global Co-Sell Prioritized ISV and Microsoft Preferred Supplier that integrates privacy, compliance, eDiscovery, and records management for the Modern Data Warehouse. Archive2Azure is a 100% Azure-powered platform for intelligent, open-standard archive that delivers long-term, secure, and cost-effective onboarding/migration, retention, and management of 100+ types of organizational data—stored in its native format in YOUR tenant and secured with YOUR keys—with audited compliance, role-based access policies, and dynamic data analysis with Machine Learning, AI, Media Services, and Cognitive Services.
